Quassel IRC - Bug #387

Core session sometimes hangs with invalid data from socket

11/04/2008 12:02 AM - Sputnick

Status:	Resolved	**Start date:**	
Priority:	Urgent	**Due date:**	
Assignee:	EgS	**% Done:**	0%
Category:	Quassel Core	**Estimated time:**	0.00 hour
Target version:	0.3.1		
Version:	0.13.1	**OS:**	Any

Description

This happens every few weeks with our core. One of the sessions goes into an endless loop, spitting this on the console:

SignalProxy::receivePeerSignal(): received incompatible Data: QVariant(,)
receieved corrupted compressed data: 0 "" 0 QSslSocket(0x181e190)
qUncompress: Input data is corrupted

Last time this happened to me, I was sitting on the train with a very slow, flaky connection while trying to attempt to sync with the core. Maybe an empty string coming from the socket is not handled correctly?
