Quassel IRC - Feature #739

More verbose output if ssl cert is expired

07/10/2009 06:07 PM - Weaselweb

Status:	New	**Start date:**	07/10/2009
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:		**Estimated time:**	0.00 hour
Target version:	Some future release		
OS:	Any		

Description

The first attached patche changes the core that if a ssl key is expired or not valid yet, a more exactly message is written to stdout or log instead of just an invalid cert.
This is usefull if you check the log searching why you can't use ssl.

The second patch changes the core and client, so the client gets the info why he can't use ssl, if the cert is expired or not valid yet.
This one seems to break the protocol.
It is debatable if such information should be given the any client user. Maybe further patches make this configurable.

- Target version set to Some future release

Setting to future because it has patches and as far as i know ssl errors are still generic.
