

Quassel IRC - Bug #1403

Backspace hides channel

04/04/2016 05:22 PM - olus

Status:	Resolved	Start date:	04/04/2016
Priority:	Normal	Due date:	
Assignee:		% Done:	100%

Target version:		OS:	Mac OS X
Version:	0.10.0		
Description			
<p>I am using OSX v10.10.5 with the client only version of 0.12.3. From time to time when I highlight text in the input box and press the backspace key it will hide the channel in the channel list instead of deleting the text. I'm not sure of all the situations where this happens, but I can recreate it by highlighting text in the input box, clicking on a channel so that the "All Chats" box is highlighted and hitting backspace. This doesn't happen if there is no text in the input box. I do not have backspace assigned as a shortcut for hiding channels. Typing /join <channel> unhides it.</p>

Remove old 'remove buffer' KeyPress code

Since commit 9f33f6e4 a 'hide current buffer' shortcut is available. This is the global application shortcut like Sput referenced in <http://bugs.quassel-irc.org/issues/668>

Keeping a hard-coded KeyPress event doing the same seems unnecessary. Users have also expressed dislike in the use of 'Backspace' for this buffer removal. Unintentional buffer removals are often for some.

This commit removes the 'KeyPress' event and cleans up the 'hideCurrentBuffer' code, removing commented (un-needed) code.

Reference: <http://bugs.quassel-irc.org/issues/1403>
Fixes #1403. Closes GH-299.
