OS: Any	
Description In the nick widget I can start a query, or whois by right clicking on the nick. It would be nice to be able too do this within the chat widget. Then I have not to search the nick widget when I want to start a query (whois, ..) with a nick who mentioned something shortly before in the chat widget.	
Additional information: [15:11:14] <billie> or having the same functions you get from right-clicking on a nick in the nicklist for the nicks in the chatwindow too? [15:15:31] <billie> EgS: what do you think about the nicks in the chatwindow? [15:15:52] <EgS> billie: to start a query? [15:16:06] <billie> or whois and so on [15:16:31] <billie> so i don't have to look in the nicklist [15:16:31] <EgS> billie: basically add the contextmenu of the nicklist and a default action for doubleclick? [15:16:47] <billie> yeah that would be nice

See [#283](#), would be good to have a centralized way for creating a context menu for buffers and nicks. ChatView will be made interactive to allow triggering such an action.
