

Quassel IRC - Bug #790

Topic Line no longer stays with the window after moving it.

08/30/2009 03:26 AM - Daegalus

Version:	0.3.0.x		

Description

The Topic Line seems to have gone rogue and no longer stays within the window or locks to the window. I can move the window around and it stays wherever it is. This happened when I tried to move it around in an unlocked layout.

Also, maybe this isn't fully implemented, but the settings.qss file has a lot more color options than what is available currently in the options dialog. But you guys are just moving to the new style engine, so I guess you just haven't gotten around to it. Having joins and parts the same color is confusing.

This is on Windows 7 RTM with 0.5.1rc+7 from the git repository. (latest one as of this post).

Screenshot is attached.

History

- Status changed from New to Rejected
- Version changed from 0.5-pre to 0.3.0.x

That is the normal behavior if a docked widget is undocked from the main window.
Easiest way to redock: double click on the handler bars on the left side of the topic widget.

#2 - 05/02/2010 03:59 AM - Daegalus

At the time, that wasn't working and it wasn't redocking, but now its a moot point since it was fixed with just normal updates. Thanks.
