#### Description

Hello,  
I started writing some code to set the spellcheck dictionary based on the Network. The code is working and has a settings menu. The code of course works only on KDE (with Sonnet).

(although I'm thinking of writing spellchecking code for OSX)

I hope you'll find this set of patches useful. (I created them with git format-path it should be easy to apply them with git am)

Hello

This feature would be very useful, but per chat room or private message instead of network based.
