<b>Priority:</b>	Normal	<b>Due date:</b>

<b>Target version:</b>	Some future release	<b>OS:</b>	Mac OS X
<b>Version:</b>	0.7-pre		
<b>Description</b>			
On Mac the own nick combobox is always rendered as focused with a glowing focus ring around it because it has a focus proxy set to the input line edit - so whenever the lineedit is focused, the combobox thinks it is also focused and hence renders a focus ring.
