<b>OS:</b> Mac OS X	
<b>Description</b> Hey ho,  it would be great if I'd be able to use QuasselIRC with the native full screen mode of OsX called presentation mode. I am not sure if this is the right name, but I am talking about the right edge of the window where you're able to get a new virtual desktop just for the current application.  Is it possible to add this feature?  Have a nice day together and thanks for your great work,  Bastian
