Target version:	0.2.0-alpha4	OS:	Any
Version:	0.13.1		
Description			
<p>I think it would be pretty nice if the client could save and load style settings automagically. This should be actually pretty easy to do:</p> <p>QStyleFactory::keys() returns a list of available styles. http://doc.trolltech.com/4.0/qstylefactory.html#keys</p> <p>The Style can be simply set using QApplication::setStyle(const QString &styleName). http://doc.trolltech.com/4.3/qapplication.html#setStyle-2</p> <p>Hint from the Qt-Docs: Warning: To ensure that the application's style is set correctly, it is best to call this function before the QApplication constructor, if possible.</p> <p>The Settingspage should note that this setting needs a restart of the client to take effect.</p> <p>Phon: I'm assigning this to you, as you've already caught some experience with the settingspages and stuff like that. Please reassign if you don't like it.</p>
