Target version:		OS:	Linux
Version:	0.11-pre		

Description

I currently have Quassel 0.10 on Arch and it works great but recently there was an update to 0.11 and after I ran the update the existing core on my computer was not found by the 0.11 version of Quassel. Every entry in my GNOME Menu was removed except for the one tagged with (Client Only).

I decided to downgrade back to 0.10 and everything worked fine again with the existing core I have.

I can't mark this as done but it seems to be fixed even if no one ever replied.
