<b>Target version:</b>	Some future release		
<b>OS:</b>	Any		
<b>Description</b>			
OpenSUSE Leap 42.3 only has Boost 1.54.0, and the requirement is for 1.56.			
Is 1.56 absolutely required, or could the required version be lowered for older distributions?

cmake: Lower Boost dep version 1.56 -> 1.54

Require Boost 1.54 instead of 1.56.

Tested to compile and work correctly on OpenSUSE Leap 42.3.

Fixes #1510.
