

## Quassel IRC - Bug #336

### Query buffer active/inactive is not always accurate after nick changes occur

10/05/2008 05:46 PM - TerrorBite

<b>Status:</b>	Resolved	<b>Start date:</b>

<b>Version:</b>	0.13.1		
<b>Description</b>			
<p>This bug appears to occur whenever a person changes nick and query windows were open to both the new and the old nick. Here is an example:</p> <ol style="list-style-type: none"><li>1) You are talking in PM to a friend with the nick User. Their query buffer shows as active.</li><li>2) User_2 joins the channel and PMs you to explain that their connection died. User_2's query buffer shows as active.</li><li>3) User quits with a ping timeout, and their query buffer changes to inactive (greyed out). So far, all is normal.</li><li>4) User_2 changes nick to User. HOWEVER, User's query still shows as inactive, and User_2's query still shows as active, despite the fact that User_2 is no longer on the channel, and User is.</li></ol>
