

Quassel IRC - Bug #398

It doesn't minimize.

11/09/2008 03:01 AM - chiiph

Status:	Resolved	Start date:	
Priority:	Normal	Due date:	
Assignee:	EgS	% Done:	0%
Category:	Quassel GUI (Qt)	Estimated time:	0.00 hour
Target version:	0.4.0	OS:	Any
Version:	0.3.1+		
Description			
<p>I'm running Gentoo Linux, with Quassel 0.3.0.3 and KDE 4.1.72. I have Quassel in system tray with no problems, but when I try to minimize it to the taskbar, it disappears from it and appears again maximize but out of focus. I've try to minimize every way I know but it's all the same. This doesn't happen with any other application, in case you think it's because of my unstable KDE version.</p>

This could / should / oh well you know the drill... just test if minimize to tray now works properly (BR #398)

History

#1 - 11/09/2008 01:18 PM - nightrose

I have the same problem.

It is because of having "minimize to tray" and "close to tray" being enabled. If I only enable "close to tray" it works fine.

#2 - 11/15/2008 08:59 PM - Sputnik

I can't reproduce this with a current git version, so I consider this fixed in git.

#3 - 01/11/2009 03:37 AM - kitterma

I can reproduce this with a git snapshot from today if minimize to tray on minimize button is set. If I uncheck that, it goes away.

#4 - 01/11/2009 05:09 AM - kitterma

[22:53:42] <Daisuke_Ido> i just built with git and can't reproduce it

[22:54:08] <ScottK> Daisuke_Ido: I also have KDE integration on. Dunno if that could matter.

[22:54:13] ScottK tries again.

[22:54:36] <ScottK> Yep.

[22:54:58] <ScottK> Check off minimize to try on minimize button and it bounces right back up.

[22:55:20] <ScottK> If I click on the icon it's fine.

[22:55:35] <Daisuke_Ido> the kde integration could matter, since i don't use kde at all

[22:55:47] Daisuke_Ido pokes Sput

[22:59:46] <ScottK> Daisuke_Ido: minimize to tray on close button does not cause the problem for me. Just minimize to tray on minimize.

[23:02:22] <Daisuke_Ido> ScottK: is kitterma you?

[23:03:00] <Daisuke_Ido> ScottK: i tried with both, and had no issues. i'm thinking it might involve the kde integration

#5 - 01/11/2009 05:26 AM - Gentle

confirmed with current git version and kde integration enabled. Minimize to tray results in instant unminimizing, while close to tray works

#6 - 01/12/2009 12:11 AM - Sputnik

- Status changed from Resolved to Feedback

- Priority changed from High to Normal

- Target version changed from 0.3.1 to 0.4.0

I'm reopening this, as there have been reports that it still doesn't work for some people. I cannot reproduce this even with KDE integration though, so we'll need someone to debug that for me...

#7 - 01/13/2009 03:33 PM - Gentle

<freedrich|> Sput: the problem happens when you have quassel set to "minimize to tray on close". So, on KDE's shutdown it probably receives a "Quit" event, but instead of quitting it tells kde "nope, I want to go to the tray again" and cancels the Shutdown/Restart process that way.
