

Quassel IRC - Bug #435

Client crashes on windows

12/04/2008 01:19 PM - pennywise

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Quassel Client	Estimated time:	0.00 hour
Target version:		OS:	Any
Version:	0.3.1+		
Description I don't know the source of the problem, but my windows quasselclient (0.3.1 [+60] git-b24a38c) just quits itself and the tray icon is "gone" when you hover over it. so it somehow crashed. See chrashlog: Additional information: Quassel IRC: 0.3.1 b24a38cf5f34f0a5e12c68d81fa4c67c849f33e9 1. 0 ??? 0x004da762 0x004da762() 2. 1 ??? 0x004b8646 0x004b8646() 3. 2 ??? 0x00bd8f10 std::_Init_locks::operator=() 4. 3 ??? 0x7c817067 RegisterWaitForInputIdle() List of linked Modules:

does this help? Looks very unhelpfull to me :)

#3 - 12/28/2008 01:51 AM - Sputnik

- Priority changed from High to Normal

#4 - 01/13/2009 09:49 PM - EgS

- Subject changed from Client "quits" to Client crashes on windows
- Status changed from New to Feedback
- Version set to 0.3.1+

Sadly this doesn't help. Maybe due to our automated stacktraces :) Seems like the trace is from a wrong thread... Have to investigate.

Anyways back to the subject: can you say what might have triggered those crashes or what you did right before the crash?

#5 - 01/13/2009 09:52 PM - pennywise

nope, sorry :/ All I remember is switching the buffer, but this isn't the reason, but maybe the trigger.

Anyway, didn't have that problem for aprox. a month, so I guess it was automagically fixed :)

#6 - 01/20/2009 08:39 PM - EgS

- *Status changed from Feedback to Closed*
