Description

This is from the Kubuntu package taken as a git snapshot late on January 19 in -0500 (first commit labled January 20 was done).

History

What Qt version was used?

#2 - 01/21/2009 08:34 PM - kitterma

4.4.3-0ubuntu1.1 (I'm guessing you only care about 4.4.3, but just for completeness ....)

#3 - 01/26/2009 12:04 AM - EgS

I suspect Qt misbehaving or maybe even something beyond Qt. There was already an issue with QPixmap which occurred only on Linux with Qt prior to 4.4.2. That reminds me of that particular bug.

# 11 libQtGui.so.4        0xb62f274b QWidget::event(QEvent*)
```

There are some symbols missing but it is obvious that the crash happened in QPixmap. As the Pixmap is created on the stack it's pretty unlikely that it's a Quassel issue.

Sput: any thoughts on this?

#4 - 02/24/2010 06:30 AM - johu

- Status changed from New to Closed

- Version changed from 0.3.1+ to 0.3.0.x

- OS set to Any

this should be fixed with never qt >= 4.5
