

Quassel IRC - Bug #538

When receiving a privmsg, the sender nick in the buffer list should be displayed with the highlighted color

02/10/2009 04:41 PM - Smarter

Status:	Closed	Start date:	02/10/2009
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Quassel Client	Estimated time:	0.00 hour
Target version:		OS:	Any
Version:	0.3.0.x		
Description			
Currently, when receiving a privmsg, the sender nick appears using the same color used for new message in a channel. IMHO think this is wrong because if someone privmsg you, it means he wants to talk to you and so Quassel should raises your attention to this buffer using the same color used when someone highlight you. Currently, it takes me sometimes to notice it when someone privmsg me because I'm used to not care about new message and only pay attention to highlights.

- File *myconfig.png* added

As I realize I'm not very clear, here is a screenshot for better comprehension ;) It shows what happens when I receive any privmsg.

#2 - 02/19/2014 12:43 AM - Sputnik

- Status changed from *New* to *Closed*
- Version changed from *0.3.1+* to *0.3.0.x*

Can be done with custom stylesheets these days.

#3 - 02/19/2014 12:54 AM - Smarter

Could you explain how to do that with a custom stylesheet? Additionally, I still think it's a useful enough feature that it'd be worth having some way to activate it in the settings.
