

Quassel IRC - Feature #794

Search 'More...'

08/31/2009 12:04 PM - CdrSharky

| OS: Any | |
| Description When using the inline search feature, would it be possible to implement something that essentially does the same as scrolling up to the top of the current buffer, in order to download x more lines from the quassel core, in order to search more of the history? IE, if there are no results, it shows a 'More...' button, downloads, say, 500 more messages from the DB, and searches them as well. | |

History

#1 - 09/11/2009 01:06 AM - Sputnik

- Target version deleted (0.5.0)

#2 - 06/22/2014 02:31 PM - seezer

- Category changed from Usability to Quassel Client

- Status changed from New to Assigned

- Assignee set to seezer

It's acutally already implemented. You only have to be lucky enough to trigger it. If a search highlights an item inside the top 20% percent of the view, a backlog fetch is triggered.

Updating of those items is a little buggy in master. If fixed one would only have to connect the "next/prev item" buttons with "request backlog". probably conditionally..
