#### Description

Currently, if I make an alias and want part of the text for that alias to be emboldened I have to open a copy of mIRC (!), type the keycut for bold text (Ctrl-B) and copypaste it into the alias in Quassel.

I would like to be able to input text styles in aliases without using external tools. This could be via a style box like the one to the side of the input widget, or simply making key shortcuts insert the appropriate magic byte into the text box.
