Description

At the moment I am running a small server and would like to have a way to set a limit to how much space the buffer on the core server can take. Either in terms of disk space or in terms of days to keep for each channel.

As the number of channels in my list grows, so will the database and it will be a good thing to have a way to control it.

Along with this feature, it would be good to have a way to see exactly how much disk space Quassel uses for the buffers.
